A subarray is ascending if every element is strictly greater than the previous element.

Return the maximum possible sum among all ascending subarrays. Complete the function maxAscendingSum that takes the following parameter: int arr[n]: an array of positive integers. Returns int: the maximum ascending subarray sum.

Input Format

The first line contains an integer n, the number of elements in the array. The second line contains n space-separated integers.

Constraints

1 ≤ n ≤ 10^5 1 ≤ arr[i] ≤ 10^4

Output Format

Print a single integer representing the maximum ascending subarray sum.

Sample Input 0

```
5
10 20 30 40 50
```

Sample Output 0

```
150
```

Change Theme Language C

```c
#include <stdio.h>
#include <string.h>
#include <math.h>
#include <stdlib.h>
   int main() {
    int n, i;
    scanf("%d", &n);
    int arr[n];
    for(i = 0; i < n; i++)
        scanf("%d", &arr[i]);
    int currSum = arr[0];
    int maxSum = arr[0];
    for(i = 1; i < n; i++) {
        if(arr[i] > arr[i - 1])
            currSum += arr[i];
        else
            currSum = arr[i];
        if(currSum > maxSum)
            maxSum = currSum;
    }
    printf("%d", maxSum);
    return 0;
}
```
